

How Build Concrete Hemispheres Instructions

Step by step to a delicate, glowing ball of concrete, which can be used as a decorative object both inside and outside.

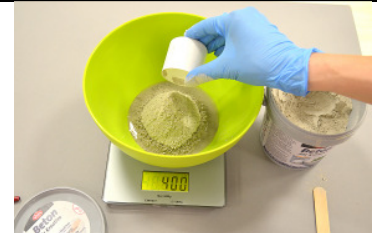

Creativity is particularly low-dust, so you can work with the concrete in the room.

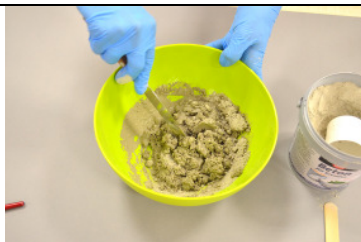

You will need

- Concrete
- Water
- Plastic bowl for mixing
- An old object for stirring(E.g., knife or spoon)
- Balloon
- Scissors, glass, brush, rubber gloves

Mix the creative concrete (400g) with some water (60g).(The mixing ratio is only a recommendation.) If your concrete mass is not solid enough after stirring, add some concrete.)

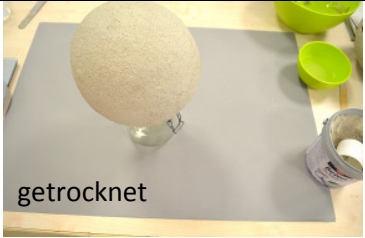

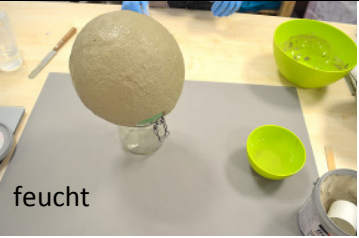

Stir concrete and water together. It is best to use an old object (for example a spoon). Stir for at least 2 minutes until the concrete becomes a thick liquid.

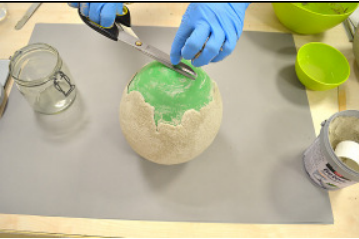

Blow the balloon to the desired size and place it (with the knots facing down) on a wide glass.Take the concrete mass and spread it slowly, layer by layer on the balloon.While applying the concrete mass, add a handful of water between them. Spread the concrete from the bottom upwards.

Let the concrete mass dry for at least 24 hours.

After the drying phase, you can cut the balloon and make your finished concrete hemisphere even further.

For the delicate gleam effect inside the concrete hemispheres, we recommend using a metallic paint, e.g. Maya Gold by Viva Decor.

Spread the golden metallic paint evenly with a brush inside the ball. Then allow the paint to dry well.

A candle or a tealight finally provide the icing on the cake for your new decoration object. This together with the golden interior makes for a very special ambience.
